Diesel Particulate Filters

MINE-X SOOTFILTER

CONSTRUCTION EARTHMOVING TUNNELING MINING INDUSTRIAL
DCL diesel particulate filters (brand name: MINE-X SOOTFILTER®) effectively reduce particulate matter and smoke from diesel engine exhaust. DCL diesel particulate filters are used to meet MSHA standards for particulate matter in underground mines, EPA or CARB standards for particulate reduction in diesel vehicle retrofits or simply to improve air quality around diesel engines. A vehicle or engine fitted with a DCL diesel particulate filter operates normally, using only the heat in the exhaust gas to continuously burn off particulates.

With thousands of installations worldwide, DCL diesel particulate filters are the industry standard for long, reliable operation. Product approvals include VERT, Japan MLIT, and Sweden Environmental Zones.

DCL diesel particulate filters work best in Tier 1 or higher diesel engines, such as construction, earthmoving and mining vehicles, stationary engines, and post 1994 on-road trucks and buses. Contact DCL or a qualified representative to determine the suitability of a MINE-X SOOTFILTER® for other applications.

**Custom Engineered Designs**
In addition to off-the-shelf designs, DCL specializes in custom filter designs that replace original mufflers and unique designs for tightly-spaced exhaust systems.

**Custom Connections**
Virtually any type of connection is available, including pipe, tube and ANSI or DIN flanges.

**Quick-Release Clamps**
With the use of quick-release clamps and a modular design concept, DCL filters can be easily cleaned and serviced.

**Heavy Gauge Stainless Steel**
DCL hardware is specifically designed for the most extreme duty applications.

---

**BASIC REACTIONS**

| C (soot) + O₂ → CO₂ |
| CO + ½ O₂ → CO₂ |
| Cₓ Hᵧ + O₂ → CO₂ + H₂O |

The catalytically-coated ceramic monolith contains long narrow channels open at one end and blocked at the other. The exhaust gas is forced to escape by passing through the filter walls, trapping particulate matter (soot) in the filter. At a high exhaust gas temperature, the soot particles burn away and transform into harmless carbon dioxide. The filter also destroys carbon monoxide (CO) and diesel hydrocarbons (HC).

**How IT WORKS**

The catalytically-coated ceramic monolith contains long narrow channels open at one end and blocked at the other. The exhaust gas is forced to escape by passing through the filter walls, trapping particulate matter (soot) in the filter. At a high exhaust gas temperature, the soot particles burn away and transform into harmless carbon dioxide. The filter also destroys carbon monoxide (CO) and diesel hydrocarbons (HC).

**Installation**

**A SIMPLE RETROFIT DESIGN FOR EASY INSTALLATION**

### How to Install

1. Install filter in a horizontal flow orientation where possible.
2. For designs containing quick-release clamps, support the filter-center body.
3. For the backpressure alarm, install a ¼” NPT port upstream of the filter at the 12 o’clock position.
4. If necessary, use a flex to isolate the filter from vibrations from the engine or exhaust system.
5. Use support brackets to mount the filter to the vehicle frame.
6. Use vibration-damping washers if mounting filter on a vehicle frame.
7. Use test ports (2 per side) for quick back-pressure or emissions measurements.
8. Connect to the engine exhaust using a tube clamp or alternatively by welding or flanges.

### OTHER CONSIDERATIONS

- Filter requires high exhaust temperatures to work properly and therefore should be located as close as possible to the turbo outlet or exhaust manifold of the engine.
- Install filter upstream of the muffler or replace the existing muffler with filter. (The sound attenuation property of filter is similar to an industrial grade muffler).
- Mount filter according to flow direction arrow on the filter housing.
- Mount filter so that it is isolated from external loads.
- Ensure filter does not support weight of exhaust pipe or any other exhaust component.
- Insulate filter if mounting it inside engine compartment or any location with nearby machinery that could be damaged by heat.

Mobile Equipment
In most respects the equipment can be driven and operated in the normal manner with a MINE-X SOOTFILTER® diesel particulate filter installed.
- Avoid idling the vehicle
- Where possible, use the vehicle for jobs involving heavy engine load avoid long usages of the vehicle for light duty activities
- Keep the engine well maintained
- Use ultra-low sulphur diesel fuel

Stationary Equipment
In most respects the equipment can be used in the normal manner with the MINE-X SOOTFILTER® diesel particulate filter installed.
- Operate at > 60% load for a minimum of 20% of the time
- Do not operate the engine at idle or low load for longer than 8 continuous hours
- Keep the engine well maintained
- Use ultra-low sulphur diesel fuel

With proper installation and maintenance MINE-X SOOTFILTER® diesel particulate filter last for years in the most extreme duty environments.

How TO OPERATE

How TO MAINTAIN

<table>
<thead>
<tr>
<th>ACTION</th>
<th>FREQUENCY</th>
<th>DESCRIPTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Manual Check of Back-Pressure</td>
<td>Every 50 hours of operation</td>
<td>Run engine at high idle and check backpressure with manual pressure gauge or manometer. Record results on a log sheet. 15° sec (2.5 kPa) = clean filter. 35° sec (5 kPa) = moderately loaded filter. 45° sec (10 kPa) = fully loaded filter (remove for cleaning).</td>
</tr>
<tr>
<td>Check for Leaks</td>
<td>Every 200 hours of operation</td>
<td>Make visual check of piping, fittings, clamps and gaskets in the exhaust system for exhaust leaks such as evidence of soot. Repair if necessary.</td>
</tr>
<tr>
<td>Check Pressure Transmitter</td>
<td>Every 200 hours of operation</td>
<td>Remove pressure transmitter and apply pressure to the line to check function of transmitter. Check for leaks. Indicator lights must illuminate at the high pressure setpoints.</td>
</tr>
<tr>
<td>Filter Cleaning (Lightly sooted)</td>
<td>Every 1000 hours of operation</td>
<td>Ash build up on the filter is removed by cleaning the filter with vacuum or low pressure compressed air. To return the filter for cleaning or for further details, contact DCL for technical support.</td>
</tr>
<tr>
<td>Filter Cleaning (Heavily sooted)</td>
<td>Every 1000 hours of operation</td>
<td>Ash and soot build up is removed by heating the filter in an oven for 4 hours at 500°C. After oven treatment any remaining loose material is removed by cleaning the filter with a vacuum. To return the filter to a qualified filter cleaning site or for further details, contact DCL for technical support.</td>
</tr>
</tbody>
</table>

Backpressure Monitor
MINE-X SOOTFILTER® diesel particulate filters are supplied with a backpressure monitor. Mounted in the operator’s cabin, the alarm device visually warns the operator of excessive build up of ash or soot before the problem becomes serious.

A yellow alarm light indicates the filter is close to reaching maximum capacity of soot or ash. It is recommended that work activity involving a high engine load (high torque with medium to high rpm) for a continuous period of 20 minutes is conducted to regenerate the filter.

A red alarm light indicates that the filter has reached its maximum capacity for soot and ash. Refer to the filter maintenance section or contact DCL for technical support.
DCL International Inc. is a global leader in the engineering, manufacturing and supporting of advanced emissions control technology for stationary and mobile industrial engines. Our products – which include oxidation and three-way catalysts, silencers, particulate filters, SCR systems and accessories – are used worldwide in the material handling, construction, mining, gas compression and power generation markets.

DCL’s dedicated industrial focus is unique in the emissions control industry. To meet the specialized needs of the industrial market, we adopt an integrated approach, bringing together product development, design, manufacturing and testing all under one roof. This single-source capability enables us to provide better engineered emissions solutions that deliver outstanding performance, longer life and lower cost of ownership. Our superior product quality has made DCL the choice of customers around the world.
